

ABSTRACT OF THE DISCLOSURE

A system includes a host computer and operational devices. The operational devices are connected to the host computer by a connection device and utilizable by users. The host computer is used for executing an
5 interactive program and a control manner specifying program. The control manner specifying program has a first routine for distributing the operational instructions of the interactive program to at least two users so that the interactive program is used by at least two users, and a second routine for changing the distribution method of the operational instructions
10 of the interactive program to the users.
